Positive Pressure Loose-Fitting | Negative Pressure Tight-Fitting

We are the respiratory protection specialists, dedicated to protecting people for life's best moments.

Protecting people drives everything we do at GVS-RPB. For over four decades, we have serviced the industrial market, working with world leading engineers, constantly pushing creative boundaries with new technology that advances our functional capabilities, seeking input from our end users, and refining our range to create the world's best respirators.

As our passion for protecting people continues to grow, we have extended our product range and branched into new industries, sharing our respiratory protection expertise to better the lives of more people. Through this growth, we have taken the next step in our journey, becoming part of the GVS Group, a global manufacturer of filtration devices for the Medical & Life Science, Energy & Mobility, and Health & Safety industries. By teaming up with dedicated filtration specialists, this enables us to expand the possibilities of what personal protection has to offer as we continue to shape the future of respiratory protection.

Contents

Our range of loose-fitting respirators pair with our supplied and powered air systems to provide you with positive pressure breathing, protecting you in the most hazardous of environments.

Z-Link® Respirator

The Z-Link® is a versatile powered or supplied air loose-fitting respirator that provides respiratory protection for a range of applications. Depending on assembly configuration, the Z-Link provides certified eye, face, head, and hearing protection.

Z-Link Headtops

Part #		Description	Certifications
16-010-31		**Z-Link Respirator - Zytec® FR Chin Seal** *Package also includes:* ▪ Safety lens. *Z-Link+ weld visor with ADF available - page 11.*	NIOSH PAPR & SAR Type C, ANSI S3.19*, ANSI Z89.1, ANSI Z87+, ANSI Z87W†, c SEI CSA Z94.3-15

Elipse® P100 Source Control Half-face Respirator

Segre Respirator

The Source Control version of the Elipse respirator is an alternative to N95 disposable respirators, reducing waste and costs for hospitals. It does not have an exhalation valve in order to avoid cross-contamination, and the exhalation valves were removed to improve the resistance providing optimal airflow.

The Segre provides a high performing, economic option for those after disposable respiratory protection. With our advanced filter technology and comfort features, the Segre N99 takes care of your safety, so you can focus on the task at hand.

Supplied Air Flow Control Devices

The flow control range allows the operator to control the flow rate, and temperature of their supplied breathing air when paired with their required SAR headtop.

These devices fit around the user's waist (belt included) and connect the supplied breathing airline to the appropriate SAR respirator (sold separately).

⚠ WARNING   PRODUCT SELECTION

1. **Determine what type of protection is required for your activity.** As applicable, check your workplace safety program, respiratory protection program, and standards and regulations for your activity or industry.
2. **Check product specifications.** Contact GVS-RPB® or check the product instruction manual (downloadable from gvs-rpb.com) for complete specifications, including approvals, standards, and regulations to which the product conforms.
3. **Make sure you have a complete system.** Verify that you have or are purchasing all required components. System requirements are available from GVS-RPB® or in product instruction manuals.

Selecting inappropriate or incomplete equipment, including the use of counterfeit or non-GVS-RPB® parts, can result in inadequate protection and will void the NIOSH approval of the entire respirator.
